Information Security Policy Statement

This Information Security Policy Statement aims to ensure that National Grower Register delivers a consistently high level of Information Security throughout its business. National Grower Register is committed to implementing and maintaining a secure Information infrastructure in alignment with ISO 27001 and to undertaking the continuous practical improvement of our information security practices. This will help maintain our reputation in the industry and meet our legal/regulatory and customer requirements.

NGR commits to:

- Clearly understanding the requirements and expectations of our customers and relevant regulatory authorities
- Working closely with our customers and suppliers to deliver services in a security conscious fashion
- Ensuring every employee shares responsibility for effective information security
- Protecting its people, information, intellectual property, assets, activities and facilities against misuse, loss, damage, disruption, interference, espionage, or unauthorised disclosure. It is also critical that we retain the confidence of those who intrust sensitive information to National Grower Register.
- Implement an Information Security Management System (ISMS) and ensure it is maintained, continually improved, and supported with adequate resources to achieve the objectives set in this Policy Statement.

Our approach to achieving these objectives is to enhance Information security through investment in technology, processes, and employee skills. Underpinning our approach to information security is our Risk Management Framework, which allows the business to present threats, risks and opportunities for management review. This allows the National Grower Register management team to ensure that the business's risk profile is accurate and that risk mitigation efforts are focused on appropriately supporting strategic outcomes.

This Policy Statement shall be easily accessible to all staff, and each member of staff is asked to take particular care in their approach to security and to accept the important role they play in maintaining an effective information security program throughout National Grower Register.
